

**RG ROM GUMMI**

**RG SEASIGHT-FENDERS**

**Meet us at  
stand 524, Hall B5**

## **WindEnergy Hamburg**

We will be exhibiting at the WindEnergy exhibition in Hamburg 27-30 September 2016 in Hall B5, stand 524. This year we exhibit together with RG Rom Gummi; one of the two companies that founded RG Seasight Fenders.

**RG Rom Gummi exhibits different hot-vulcanized rubber products for boat landings and jackets such as vibration absorbing elements.**

The reason why RG Rom Gummi uses hot-vulcanization is that it gives a far better quality and durability than the alternative, cold-vulcanization. The hot-vulcanization process is comparable with welding, while the rubber melts

**We at RG Seasight Fenders will present our high quality rubber fenders for offshore vessels like Crew Transfer Vessels.**

Rubber fenders ensure the most durable fender along with a greater friction, better grip and last but not least the opportunity to renovate. The fenders are subjected to a great pressure, and will eventually wear out. The RG Seasight

together resulting in a very strong rubber structure. RG Rom Gummi has used the hot-vulcanization technique for more than 30 years and thereby gathered extensive knowledge and experience about the process.

Fenders last long due to the wear resistant rubber quality, we use, but in time even our fenders become worn out too. To meet this, our production methods ensure that we can renovate the fender and even modify - reduce, enlarge or reshape - it according to your wishes within only 48 hours.

In September 2014, the new big trade fair for wind energy was premiering in Hamburg and became a meeting point for a large number of both exhibitors and visitors. With more than 33,000 visitors, and more than 1,200 exhibitors participating in 2014, our expectations are up for the 2016 WindEnergy exhibition. We look very much forward to welcoming you at our stand.
